

# - infection control in a can

Introducing

**easy-on**<sup>TM</sup>  
PROTECTIVE COATING

The revolutionary solution that can give your walls up to 20 years protection.

Brought to you by Urban Hygiene

**Just what  
hospitals need**

## Infection control in a can

**easy-on** is an incredibly tough and durable infection control coating. Just one coat of this safe and easy-to-use paint dramatically improves a drab-looking ward and will protect it against the spread of infection for the next 20 years.

Independent testing has shown that when painted walls are wiped, bacteria is left behind to breed, but when walls have been protected with easy-on, 100% of bacteria is removed without damage.

The quartz-like structure of **easy-on** withstands daily scrubbing for up to 20 years without staining or discolouration, so even the toughest of hospital cleaning regimes won't compromise its newly painted good looks.

Bacteria, germs, stains, scuff marks and even graffiti can all be eradicated without needing to re-apply the coating. This means that regular redecoration, and the disruption it causes, could become a thing of the past.

Every hospital corridor, ward, theatre and wall can be upgraded ; so if you're considering any redecoration make sure your top coat is the hygienic tough coat - **easy-on**.

## The benefits are clear

- ✓ Resists bacteria, germs, scuffing, blood, graffiti, uric acid, etc,
- ✓ Simply brush, roller or spray apply to protect **any** surface
- ✓ Permanent non-stick finish makes cleaning easy
- ✓ Dries to form a seamless and hygienic wipe clean barrier
- ✓ Incredible long life, up to 20 years protection
- ✓ Less redecoration = less disruption
- ✓ Withstands 100s of cleaning operations
- ✓ Highly abrasion resistant – absorbs damage and impacts
- ✓ Quick drying - single coat application
- ✓ Low odour and solvent free
- ✓ Class 'O' fire rating – complies to all building regulations
- ✓ Can be applied over corner guards, wall sheeting and bump rails
- ✓ Withstands knocks and bangs from trolleys and equipment
- ✓ Suitable for corridors, stairwells, wards, theatres, clean rooms, etc
- ✓ Resists everything hospital life can throw at it
- ✓ Independently tested

# Joining the fight against hospital superbugs

**easy-on+ anti bacterial** coating incorporates Akacid (plus), a biocide proven to disrupt the cell surfaces of bacteria and reduce hospital acquired infections including MRSA, E Coli, Salmonella and Listeria.

Tests by the biomedical research department at Sheffield Hallam University have shown that when panels coated with **easy-on+** were contaminated the added Akacid (plus) provided continuous protection from bacterial infection, HAI's and fungal growth and eliminated all hospital pathogens within 340 minutes. This evidence combined with easy-on's durable nature make **easy-on+ anti bacterial** coating a longer lasting and more cost effective alternative to silver ion technology.

**easy-on+ anti bacterial** coating is perfect for all situations where hygiene is essential, **easy-on+** should be used to offer anti bacterial protection in hospitals, vets and food preparation areas. Once applied **easy-on+** still offers all the benefits of our standard easy-on protective coating and will withstand 100's of cleaning cycles and last for up to 20 years.

**easy-on+ anti bacterial** coating is available as a clear finish and can be applied over any existing bare or painted surface including brick, stone, plaster, metal, powder coatings, plastics and woods.

**easy-on+ anti bacterial** coating enables hospitals, vets and food preparation companies to save money whilst reducing infection and improving the aesthetic environment.

**easy-on+ anti bacterial** coating = visibly clean and hygienically clean walls and surfaces for up to 20 years.

## The 'super bug' destroyer

Testing has proven easy-on to be one of the most important breakthroughs in hospital infection control. easy-on will prevent the colonisation and growth of major pathogenic bacterial species whilst enabling daily cleaning to take place without discoloration to walls ceilings or doors. easy-on is not only the greatest advance in the fight against "Super bugs" we've seen but it will also save the Health Service millions of \$\$\$\$s in redecoration costs every year. Truly a "world beating" product.

## Less ward closures

The benefits to using easy-on are many. Obviously wards protected with this infection control coating are much cleaner and the risk of HAI's is therefore greatly reduced. One key benefit is that because easy-on protected wards only need redecorating every 20 years there are far less ward closures. Good news for anyone on a waiting list.
