**Envirothaw** is the **environmentally friendly** way of melting snow and ice and preventing refreezing for up to 48 hours.

## 6 reasons why you should use Envirothaw.....

- 1) **EASY APPLICATION** – the pale blue granules are very visible when applying.
- 2) **FAST ACTING** – Much faster than Rock Salt / grit because the pellets rapidly penetrate the frozen surface to initiate the melting process.
- 3) **GREAT COVERAGE** – Clears a square metre of snow and ice with only 30gramms of Envirothaw pellets.
- 4) **HIGHLY EFFECTIVE** – Works on ice temperatures below the freezing point of salt grit which is only -8.
- 5) **ENVIRONMENTALLY SAFE** – 90% less corrosive than rock salt. It will not damage roads, paving, carpets, floor coverings, garden vegetation and is also non toxic and safe for animals and humans.
- 6) **VERY EFFICIENT** – Can work for up to 48 hours by depressing the freezing point of water so that it remains in a liquid state to stop re-freezing.

If you would like to find out how **Envirothaw** can help your business this winter, please contact us now!
